

KF SECURE-BR ALFALFA

BRANCH ROOT SYSTEM SECURES PLANT AND TOLERATES WETTER SOILS

Secure-BR combines high resistance to the pathogens that inhabit wet soils which include Aphanomyces root rot (Race 2) along the branch rooted feature. Its root system has been genetically designed with a greater degree of the branched rooted trait. This trait helps keep more of the root system above the water table and better **secures** the plant in the ground when freezing and thawing occurs. The branch-rooted trait will adjust as moisture stresses intensify.
